Standard Board

We use our own standard control system board which enables us to strip out and discard the machines' old cable wiring loom and replace with reliable printed circuit board alternative

AC motor control

We utilize standard AC motor and inverter control in a closed loop servo environment.

Highly accurate closed loop servo control is achieved .

Standard HMI

Standard off the shelf HMI panels are utilized from manufacturers such as Mitsubishi or Proface.

We can customize screen layouts to reflect your current factory systems or use our standard easily interpreted operator interface.
