Paintwork

The machine is completely stripped and all redundant holes are welded and filled. The complete body and all painted parts are shot blasted and powder coated for durability.

Mechanical

All of the mechanical components are inspected and replaced if there is any detrimental wear. All bearings are replaced regardless of condition. All plated components are stripped and re plated / anodised. Any noted design issues are rectified.

Electrical

The machine is completely rewired. Machines can be upgraded from mechanical to multi - axis electronic servo drives. All components are replaced with new items. Special software features and interfaces to other equipment can be incorporated. Control systems available are:

AB Control Logix

Mitsubishi Q series

Midas motion
