

Flowrap Systems Ltd Providing quality support for Packaging Machinery, Industrial Equipment and Commercial Systems

Flowrap Systems Limited

Was founded in order to provide high quality technical, engineering and management services in a consistent, efficient and effective manner in total partnership with its clients, and is committed to a continual improvement program in this regard.

Following many years of experience in the packaging and electrical/electronic industries Flowrap Systems Ltd is committed to providing absolute quality of service to its customer base.

✓ **Project Management Services**

Providing “hands-on” management, engineering & technical resources. Provision of CAD drawings and all other relevant specification documentation etc.

✓ **Engineering and Technical Consultancy Services**

Providing conceptual support in planning production lines and associated plant & services required through to full implementation of project.

✓ **Engineering & Technical Services**

Electrical, mechanical and electronic engineering resources available to tackle any industrial eventuality from machinery breakdown repairs to equipment and process control modifications.

✓ **Design and Manufacture**

Of electrical control cabinets and control systems for packaging lines and process equipment. Complete electronic control system upgrades for packaging machinery.

✓ **Maintenance and Repairs**

To packaging machinery and other general industrial equipment, Site and plant maintenance services.

✓ **Refurbishment and Modification Services**

To packaging machinery and industrial equipment.

✓ **Commercial and Industrial maintenance and control systems design**

Providing a complete maintenance service for commercial electrical installations and general industrial equipment, and design and manufacturing facilities for electrical control cabinets and systems.

- **Project Management Services**

Providing “hands on” management, engineering & technical resources. Provision of CAD drawings and all other relevant specification documentation etc.

- **Engineering and Technical Consultancy Services**

Take the headaches and pressure out of managing your own projects, we can take full responsibility for managing projects of any size from small add on pieces of equipment to complete turnkey packages.

We can liaise with all parties concerned, equipment suppliers, materials and services suppliers, subcontractors etc and coordinate all of these to maximise efficiencies and successfully conclude the project in as short a timescale as possible.

- **Engineering & Technical Services**

Electrical, mechanical and electronic engineering resources available to tackle any industrial eventuality from machinery breakdown repairs to equipment and process control modifications.

- **Maintenance and Repairs**

To packaging machinery and other general industrial equipment, Site and plant maintenance services.

Many years of experience in the production engineering backgrounds and the packaging industry allow us to provide fast and efficient solutions in equipment breakdown and production line stoppage situations.

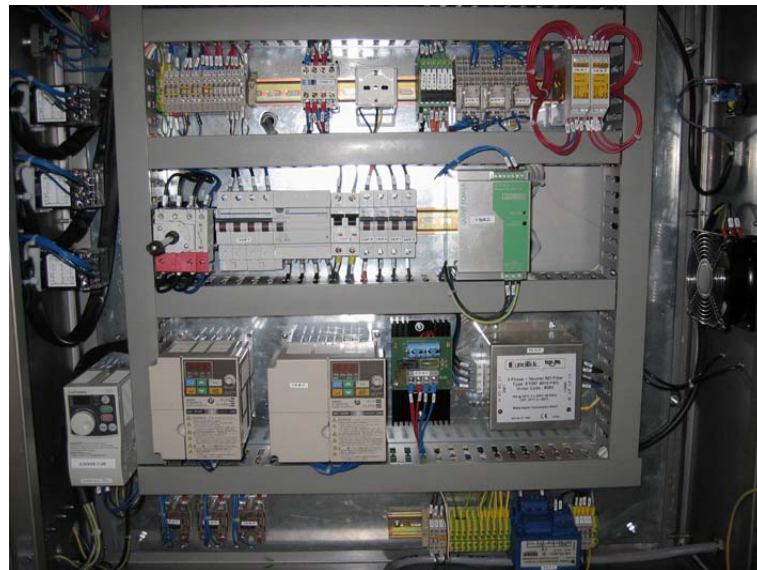

We can provide electrical and mechanical engineering support for a wide variety of equipment from standalone Packaging or Form Fill & Seal machines to Complete Automated Packaging Lines.

- **Design and Manufacture, control panels and systems**

We supply electrical control panel systems, designed for your specific requirements to provide control solutions and for packaging line integration.

We can also provide control systems for general industrial and commercial control requirements from simple Conveyor System Control to complex Industrial Motor Control and System Management.

- **Refurbishment and Modification Services**

Refurbishment and machine upgrade services, we can provide all remedial work resources and services to return your equipment to full efficiency with improved reliability and update equipment with the latest options where applicable.

We can provide updates for machines and equipment to improve reliability and process efficiency.

- **Commercial and Industrial maintenance and control systems**

We can provide a complete installation and maintenance service for commercial and industrial plant ranging from general industrial plant & machinery to water pump systems, conveyor systems and lighting control systems.

We can provide control panels and systems manufactured to your requirements and specifications.
